

#### **Lignovit Plus** 53220 ff

Water-based, thin-film wood glaze for industrial and professional use

	PRODUCT DESCRIPTION		
General	Water-based, thin-film, block resistant wood glaze for exterior use based on acrylate and alkyd resin dispersion for industrial and professional use. The product is characterised by very good processability, good weather resistance and uniform degradation when exposed to weathering.		
Special properties and standards	<ul> <li>The coating is protected against blue stain and mold by a biocidal active substance.</li> </ul>		
	Active substance: 3,0 g / kg (0,3 %) IPBC (iodopropynylbutylcarbamate)		
EMISSIONS DANS L'AIR INTÉRIEUR-	<ul> <li>French ordinance DEVL1104875A regarding the marking of construction coating products for their emission of volatile pollutants: A+</li> </ul>		
Application areas	<ul> <li>For non-dimensionally stable and limited dimensionally stable timber components for exterior use, such as e.g. wooden houses, timber cladding, canopies, profile boards, window shutters, balconies, gates, etc.</li> </ul>		
	We recommend Pullex Bodenöl 50527 ff for terrace floors and landing stages.		

- landing stages.
- Particularly suitable for softwoods.
- Not suitable for direct contact with food or forage.
- Not suitable for wood with permanent ground and/or water contact.
- In the case of highly resinous Siberian larch and cedar, the durability of the coating system may be reduced on planed wood.
- Please observe the relative technical data sheets of the products.

## **PROCESSING**

## Instructions for use

- Please stir the product before use. However, prevent entry of air while stirring.
- The temperature of the product and object, and the room temperature must be at least +10 C.
- The optimal conditions for use are between 15 25 °C with a relative atmospheric humidity between 40 – 80 %.

- Do not process it under conditions of intense sunlight, rain, extremely high humidity, strong wind or pending frost.
- For new timber components we recommend an all-over coating
- The flow of resin cannot be avoided based on the coating method.
- Water-soluble wood extracts can be leached particularly by driving rain. This can be minimized by an all-over coating and additional sealing of the end grains.
- Residual plaster (high level of alkalinity) or ferrous dust (rust formation) may lead to black discoloration on larch wood and other types of wood rich in extracts.
- Please follow our ARL 500 Working guideline for coating nondimensionally stable and limited dimensionally stable construction elements - General part.

## Application technique

Application method	Vacumat	Brushing		
Application	2 x			
Dilution (thinning)	water			
Addition of thinner in %	0 - 5			
Yield per application	-	approx. 10 – 12		
(m²/l)		(planed)		
Quantity per application	90 – 120	-		
(g/m²)	(planed)			
1) Yield including addition of thinner.				

#### The product is ready to use.

The shape and properties of the substrate and wood moisture affect the consumption / yield. Accurate values for consumption must be obtained by applying trial coats in advance.

### **Drying times**

(at 23 °C and 50 % rel. humidity)

Dust-dry	approx. 30 minutes
Grindable	approx. 3 – 4 hours
Recoatable	approx. 3 – 4 hours
Dried through	approx. 12 hours

The figures given above are reference values. The drying time depends on the type of substrate, coat thickness, temperature, air exchange and relative atmospheric humidity.

On types of woods rich in extracts (such as oak, iroko), the drying process may take longer.

Low temperatures and / or high levels of atmospheric humidity can increase the drying time considerably

Avoid direct sunlight (very quick drying).

# Cleaning the working equipment

With water immediately after use.

To remove dried paint residues we recommend using ADLER Aqua-Cleaner 80080 (diluted 1:1 with water).

	SUBSTRATE	
Type of substrate	Softwood planed, sanded or rough sawn.	
	Increased consumption can be expected on rough sawn substrates.	
Substrate property (or condition)	The substrate must be dry, clean, capable of holding the paint, free from separating substances such as grease, wax, silicone, resin etc. and free from wood dust, as well as tested for suitability for coating.	
	A prerequisite for ensuring long durability of the coating is to observe the basic principles of constructional wood preservation.	
Wood moisture	15 % +/- 2 %	
Preparation of the substrate	Wood and wood-based materials, outdoors For optimal durability we recommend to sand smooth wooden surfaces with grain size 80 – 120 in the direction of the fibre, clean thoroughly and remove wood extractives such as, for example, resins and resin pockets. Round off any sharp edges.	
	Clean highly resinous timbers containing drying retardant components with ADLER Nitroverdünnung 80001.	
	Please observe the relative technical data sheets of the products.	
	COATING SYSTEM	
Impregnation	If necessary outdoors, apply 1 coat of Lignovit Primo 5358000200 (applies to timbers of durability class worse than 3 according to EN 350-2) to protect against blue stain, fungal decay and insect infestation.	
	Use wood preservatives safely. Always read the label and observe the relative technical data sheets of the products before use.	
Primer coat	1 x Lignovit Plus 53220 ff	
Intermediate sanding	Slight smooth sanding with grit size 220 - 240	
	Remove sanding dust.	
Final coat	1 x Lignovit Plus 53220 ff	
	MAINTENANCE & RENOVATION	
Maintenance and renovation	The durability depends on several factors, these include particularly the type of weathering, constructional protection, mechanical stress and the choice of colour applied. To obtain long durability, preservation work is necessary in time. Therefore, we recommend annual maintenance.	
	If required, remove dust and dirt from the still intact areas and paint 1 - 2 x with Lignovit Plus 53220 ff.	
	Please follow our ARL 504 - Working guideline for coating non-dimensionally stable and limited dimensionally stable construction elements - Maintenance and Renovation.	

	ORDERING	ORDERING INFORMATION
